advanced network systems

A complete, managed solution for core networks

Your core IT systems should be investments that support business growth, not a drag on your productivity and profitability.

To be successful, your organization has to have a network foundation that's reliable and can keep up with your growth and changing business needs. At the same time, many small and medium-sized organizations can't afford to hire the kind of IT expertise it takes to properly manage all the core components of their network. Most find the challenges of continually keeping up with managing their network technology an overwhelming job; and too often mistakenly put these critical tasks on the back burner.

Maximum Uptime and Reliability.

With intelligent remote monitoring, we proactively watch over your IT environment 24/7— keeping small issues from becoming big expensive ones. If something does fail, the IT experts in our Network Operations Center go to work to fix the problem, minimizing your downtime. So, there's no more gambling with your employees' productivity and your company's reputation.

Lower, Predictable Costs.

Our program is designed for small-mid sized organizations and scales with your operational needs. You'll know how much you're going to spend each month for IT. With no surprise fees for emergency repairs, you won't have to guess about how much to plan for when it comes to core network expenses.

Fully-managed "best practices."

IT systems need to be maintained for security and best performance. Our program addresses, prioritizes and streamlines the implementation of best practices including applying patches and service packs, verifying backup routines, and a host of other proactive services. This extends the overall lifecycle of your devices and maximizes the value of you IT investments over time.

Take the cost and complexity out of managing your network.

Maintain your network without the needfor in-house expertise. Our flexible, one-stop program provides the essential services you need for a wide range of devices, and eliminates the cost and technical challenges of trying to handle it all on your own.

Network Management Program Services

Every organization can now have the essential services needed to maintain their core network for security and best performance.

> 24x7 systems monitoring

> techncal issue alerts, response & remediation

> proactive systems maintenance

> systems administration

PROGRAM FEATURES

Basic

Whether you have some IT staff, or none at all, we flexibly deliver all the essential technical services needed to manage the day-to-day requirements of your network foundation. Our tools and proactive services provide a cost-effective way to properly maintain all the core systems that are critical to running your operations and supporting your employees' productivity.

We utilize intelligent monitoring tools to track and analyze your core network systems activity around the clock. When a system we're monitoring indicates an issue, an alert is generated. Then, we automatically work to resolve it. In addition to system failure remediation, we perform proactive maintenance – including software/firmware patching and updates – essential tasks that significantly reduce security threats, downtime and the need for many typical emergency break/fix services.

What Is A Core Network System?

A network resource within the IT data center infrastructure which, when inoperable (in whole or in part), will have a significant effect on the IT operations of an organization. Examples include:

> Physical Server   > Firewall
> Virtual Server   > Switch/Router
> Network Storage   > Wireless Controller

Systems Administration

Systems administration, is an add-on level of advanced services that includes all the monitoring, remediation and maintenance benefits of our basic service level above, plus the IT expertise needed to perform administrative changes to your network resources. A wide variety of administrative tasks – like maintenance of user accounts and permissions, or creating new folders and directories on your servers, or changing security policies within your firewall – are all included, giving you better control over these ongoing costs. Our experienced technicians will perform all monitoring, remediation, maintenance, and administrative tasks remotely at first, with additional resources as needed.
