

## managed firewall service

### *minimize security risks and solve business challenges*

- No capital expense required
- All-inclusive, flat-rate monthly billing
- 24x7 logging, management and maintenance\*
- Hassle-free service: employs best practices and best-in-class firewall protection
- Meet compliance requirements for PCI, HIPAA, GBLA, FISMA and other regulations

Your firewall plays a critical role in preventing harmful traffic from gaining access to your network and the data that resides on it. But selecting the right solution, logging its operation, and consistently applying best practices to its management, can be a tedious and resource-intensive job. Outsourcing the management and maintenance of your firewalls takes the burden off of your in-house staff, provides the right level of service and security expertise, and reduces operating expenses over time.

Advanced Network Systems' Managed Firewall Program is carefully designed to fit the diverse requirements of today's connected organizations, including small and medium-sized businesses, government agencies, and schools. It frees you from the resource-intensive work of maintaining your firewall, reduces your organization's exposure to the latest exploits and provides the services needed to maintain regulatory compliance.

Make smarter IT decisions by aligning your security program with your budgetary requirements. Start the process today by contacting us at 800.639.6757 for a no-obligation conversation.

*\*may require local network resources*

## PROGRAM FEATURES

- A next-generation firewall appliance, correctly sized for your organization
- Expert implementation and custom configuration to meet your specific security needs
- An integrated, Unified Threat Management (UTM) security software solution including:
  - Gateway Antivirus—Scans traffic at the gateway to stop threats before they gain access to your servers.
  - WebBlocker— Guards your network against risky web content and malicious activity using advanced web filtering.
  - SpamBlocker— Highly reliable protection from spam and phishing attempts
  - Application Control— Allows, blocks, or restricts access to applications based on a user's department, job function, and time of day
  - Intrusion Prevention Service—Examines network behavior to identify and block malicious traffic
  - Data Loss Prevention— Protects confidential information from being transmitted via email/web/FTP
  - Network Discovery— Provides total visibility into every device connected to your network.
  - APT Blocker—Detects and stops advanced malware threats designed to evade traditional security defenses
  - Threat Detection & Response—Correlates security data with threat intelligence to detect, prioritize and enable immediate action against malware attacks.
- Continual, centralized logging and management of your firewall appliance
- Patch management services for all firewall and wireless equipment
- Automatic, periodic backups of firewall configuration saved in the cloud
- Advance hardware replacement for equipment failures throughout the managed FWaaS period.
- Certified engineers that provide remote support, and answers to product and risk-related questions
- Cloud-based log storage
- Executive-level firewall summary reports

## PROGRAM BENEFITS

- Get powerful, "real-time" protection against the continually changing and increasingly dangerous cyberthreat landscape
- Hassle-Free service and support: a solution managed 100% for you by our technical team
- No upfront CapEx costs for expensive hardware
- No annual fees for licensing or warranty support
- Flat monthly fees— no hidden costs or surprises
- Remedy gaps in your team's security skills
- Reduce security administration overhead and use your internal staff for other core business functions
- Meet regulatory compliance requirements including log storage
