

Increase Productivity & Collaboration with Multi-Point Video

Mitel Connect CLOUD video collaboration makes it easy to bridge the gap between multiple office locations and remote workers with face-to-face interactions.

Mitel Connect CLOUD empowers your business to go beyond messaging and voice with multi-point video conferencing. Improve collaboration, increase communication accuracy and enhance customer experiences with real-time, face-to-face video interactions. Mitel Connect CLOUD video collaboration tools are simple to deploy and easy to maintain - enabling users to join a video call with one click. Unlike other video tools that require multiple applications that silo your communications, video functionality is built into Mitel Connect CLOUD so users can access voice, messaging and video all from a single client without the need for additional hardware - making interactions simple and more productive.

Benefits of Mitel Connect CLOUD Video Collaboration:

Easy to Setup, Easy to Join

Quickly schedule a video meeting from within the Mitel Connect client and let multiple users join with a simple click. Attendees that aren't Mitel Connect users can easily join via a web browser.

Increase Efficiencies

Streamline workflows and improve productivity with end-to-end collaboration tools such as voice, messaging and video all from a single client. Video collaboration is included with Mitel Connect CLOUD Essentials, Standard and Advanced service plans in the U.S., UK and Australia.

Bring Dispersed Teams Together

Geographically dispersed teams are becoming the norm. With Mitel Connect CLOUD, you can bridge the gap by hosting video meetings that support up to 24 participants.

Security & Quality You Can Depend On

With Mitel Connect CLOUD, you can count on HD video quality over a secure connection. Our signaling and media channels are authenticated and encrypted to ensure you have a secure video connection at all times.

Solution Specifications:
